

For Immediate Release

John D. Redfern, former Chairman and CEO of Lafarge North America and Lafarge Canada, appointed Chairman of Advisory Board for Clean Water Resources

FAIRFIELD, Connecticut—April 23, 2007

Clean Water Resources (“CWR”) announced that CWR John D. Redfern, former Chairman and CEO of Lafarge North America and Lafarge Canada, has been appointed Chairman of Advisory Board for Clean Water Resources. John brings broad and deep experience in the global construction materials market and has a strong track record of environmental advocacy. He will lead a distinguished Advisory Board which represents each of the major constituencies involved developing new solutions and approaches to the nations pressing water and infrastructure needs.

John Redfern is the ideal person to lead our Advisory Board, said David Sinclair, President of CWR. “I have known John for a long time in both a personal and professional capacity and he is first-rate in all respects. John’s expertise and track record in the products sector speaks for itself, but, importantly for us, John also has a long history of environmental involvement. John understands both the need for innovation in this area as well as what it takes to develop and execute a successful long-term strategy for new products.” Mr. Redfern noted that “CWR has developed several new high-performance products and services and the potential impact is profound. Water and sewer infrastructure assets are in desperate shape. These systems were built at a time when water was free and there was “no cost” to pollution and performance didn’t matter. The world is very different now. We are now only learning the true value of water and cost of pollution. “Performance-based specifications” were now very relevant. I am looking forward to helping CWR drive significant change in the way sewer collection systems and water distribution systems are built and managed.”

About Clean Water Resources (www.CleanWaterResources.com):

Clean Water Resources is a multi-dimensional private company that distributes leading-edge products and markets financial solutions for infrastructure, with particular emphasis on the sewer and water industry. It recently introduced Duracoat™ (an ultra high performance concrete) and The Lifespan System®, (a state-of-the-art system for manholes, catch basins and utility structures). The CWR Capital Program is a design-build-finance (D/B/F) contracting solution that provides risk capital and performance-based payment alternatives to system owners for addressing Clean Water and underground infrastructure issues.
